Torque

Decimal hardware

Use the torques in this chart when special torques are not given. These torques apply to fasteners with both **UNC** and **UNF** threads as received from suppliers dry, or when lubricated with engine oil. Not applicable if special graphities, Molydisulfide greases, or other extreme pressure lubricants are used.

Basic instructions

Coolant solution

Put only ethylene-glycol coolant solution in the cooling system. Use good quality ethylene-glycol that has a high boiling point with no additives to prevent leakage. Do not use non-approved anti-rust additives. Anti-rust additives and ethylene-glycol can mix and work against each other, reducing anti-corrosion protection, forming deposits in the cooling system, and causing damage to the cooling system and radiator. Contact your Dealer who can supply you with the suitable coolant solution.

Anti-freeze/Anti-corrosion

Use anti-freeze in all seasons to protect the cooling system from corrosion and risk of freezing. For areas where the ambient temperature is over **-36 °C (-32.8 °F)** use a blend of 50% ethylene-glycol based anti-freeze.

For areas where the temperature is below **-36 °C (-32.8 °F)** - it is advisable to use a blend of 40% water and 60% anti-freeze.

Fuel

Use diesel fuel suitable for the ambient temperature conditions (**ASTM D975**).

Use fuel which is to **ASTM** (American Society for Testing and Materials) **D975** standard (North America). In Europa, fuel must comply with specification standard **EN 590** or ITS EQUIVALENT.

Use grade No. 2 fuel. The use of other types of fuel can result in a loss of power of the engine and may cause high fuel consumption.

In very low ambient temperatures, use a mixture of fuels No. 1 and No. 2 as necessary. Consult your fuel supplier for appropriate fuel supply.

If the temperature falls below the fuel cloud point (point at which wax begins to form) the wax crystals will cause power loss or will prevent the engine from starting.

In cold weather, fill the fuel tank at the end of the day's work in order to prevent the formation of condensation.

Engine oil

NEW HOLLAND AMBRA UNITEK CJ-4 ENGINE OIL SAE 15W-40 is recommended for your engine. This oil insures correct lubrication of your engine in all working conditions. See **General specification ()** to choose the correct oil for climate/temperatures.

If **NEW HOLLAND AMBRA UNITEK CJ-4 ENGINE OIL SAE 15W-40** cannot be obtained, use only oil of the **API CI4** category.

NOTE: Do not put any performance additive or other additive in the sump. Oil change intervals shown in this manual are based on tests carried out utilizing **NEW HOLLAND CONSTRUCTION** lubricants.

LEL112WL30004AA 1

Fuel storage

Prolonged storage of fuel can lead to the accumulation of impurities and condensation in the fuel. Engine trouble can often be traced to the presence of water in the fuel.

The storage tank must be placed outside and the temperature of the fuel should be kept as low as possible. Drain off water and impurities regularly.

Hydraulic fluid

NEW HOLLAND AMBRA HYDROSYSTEM 46 HV is specifically designed for high pressure applications and for NEW HOLLAND CONSTRUCTION hydraulic systems. Your NEW HOLLAND CONSTRUCTION Dealer can provide hydraulic fluid to fulfill different climate/temperature conditions. Refer to the **General specification ()**.

Transmission component oil

Extreme pressure oil should be used for enclosed transmission components. Choose an oil that is manufactured for your climate/temperature conditions such as **NEW HOLLAND AMBRA MULTI G 134™ HYDRAULIC TRANSMISSION OIL**. See **General specification ()**.

Grease

The type of grease to use depends on ambient temperature such as: **NEW HOLLAND AMBRA GR 75 MD**.

Environment

Before you service this machine and dispose of oil, fluids, and lubricants, obey environmental regulations. Do not drain oil or fluids on to the ground or into containers that leak. Check with your local environmental, recycling center or your Dealer for correct disposal information.

Instrument cluster displays

1. With the engine running, press the up or down key and scroll through the information screens and trip screens. The following sequence is using the down key only.

NOTE: Pressing the escape key will return the LCD back to the normal driving screen.

2. From the driving screen push the down arrow, as shown.
